SPECIALIST COOLING TOWER MAINTENANCE

Chemistry keeps it safe. Engineering keeps it running.

Your water treatment contractor checks the water. Who's checking the gearbox?

Higher performance from the cooling plant you already own.

A cooling tower is two things: a water system and a machine. Water treatment looks after the water. Our engineers look after the fans, motors, gearboxes, bearings and fill.

Your water treatment visit

Chemical dosing and control

Water sampling and analysis

Legionella risk monitoring

Cleaning and disinfection

The water. Essential, and only half the job.

Vistech specialist maintenance

- ✓ Fan, shaft and bearing checks and lubrication
- ✓ Drive alignment, belts, pulleys and gearboxes
- ✓ Noise, vibration and fan rotation checks
- ✓ Fill pack, drift eliminator and nozzle inspection
- ✓ Make-up valve, strainers, casing and coatings
- ✓ Written condition report with clear recommendations

We work alongside your water treatment provider, not instead of them.

Lower running costs

A tower running at optimum performance uses less energy and less water.

No nasty surprises

Planned outages and early warning of wear, so you control the budget.

Longer asset life

Fewer breakdowns and a lower lifecycle cost for every tower.

Book a free cooling tower condition report

Planned specialist maintenance from £700 per tower per year.

vistechcooling.co.uk

One partner from survey to after-care. We stay after handover and look after the plant we have improved. Cooling tower specialists since 2003, UK partner for EWK, trusted by hospitals, airports, manufacturers and London's commercial landmarks.
